# MARINE BIMINIS

- ✓ 100% Polyester Top
- ✓ Bimini Boot and Rear Support Arms are Included
- ✓ Zips Sewn into Front and Rear of Bimini Top

## *How to Measure for a Bimini Top*

To determine which size bimini best suits your boat and requirements, simply measure the length and width of your boat and then decide on the height you want the bimini to be.

1. Using a tape measure, decide which size shades the portion of the boat you want the bimini to cover, ie. 71 inches or 95 inches.
2. The pivotal mounting point will be approximately at the center of the bimini on each side of the boat. The deck mounts included with the bimini are designed to mount on a relatively flat and horizontal surface. Side mounts are supplied with this product.
3. After determining where the pivotal mounting location will be on each side of the boat, measure the distance between these mounting points to determine the width of bimini you need.
4. While standing inside the boat, measure from the pivotal mounting point straight up to determine the desired height.

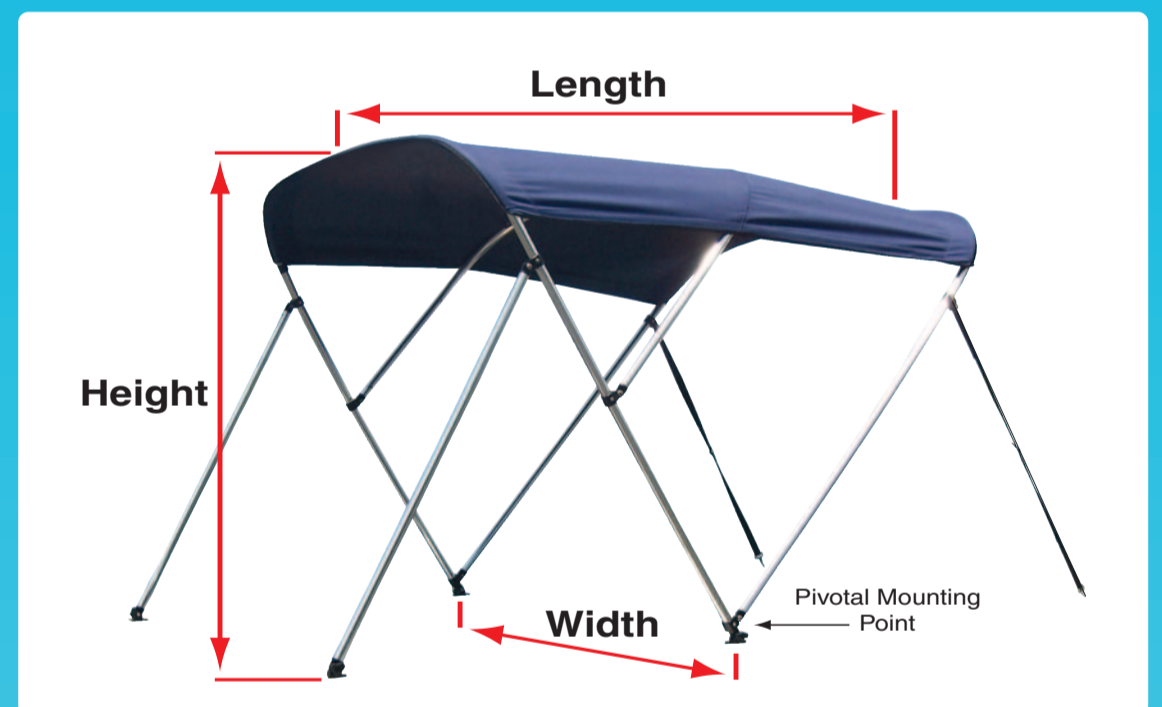

Once you have all the measurements, simply go to the sizing chart on this box and select the size that best suits your needs. All of the instructions are supplied in the box.
