

Ferrari Soltis Air

A relatively thin, lightweight fabric, Ferrari Soltis Air is specifically designed for retractable awning applications. It can be horizontally or vertically welded or vertically sewn because of its weight and thickness. Due to its inherent micro-aeration, absorbed heat is released and air is allowed to flow through and around the awning, eliminating that stuffy feeling beneath it. The fabric's natural citronella scent delicately perfumes the area beneath the awning as it works to naturally repel insects. Made with the exclusive Ferrari patented Précontraint® process, Soltis Air is dimensionally stable, flexible in extreme cold, and highly resistant to the dangers of windy conditions.

Fabric: High Tenacity Polyester

Finish: Vinyl

Width: 47.25 inches

Weight: 11 oz. per sq. yd.

Put Up: Approx. 65-yard rolls

Ferrari Soltis Air
