

Jet Tex Classic Wallcovering Technical Data Sheet 2022

Care and Cleaning Recommendations

Saint Clair Textiles recommends cleaning Jet Tex Wall Covering with a sponge dampened with warm water. We do not recommend cleaning aggressively, as it may adversely affect the image. For stubborn stains, you can use a mild soap with warm water. Lightly apply with a sponge from the bottom upward. Rinse thoroughly with warm water from the top down using a sponge.

It is always recommended that you test an inconspicuous area first before cleaning the entire wall covering. This will ensure that you do not damage the image prior to testing.

Do NOT use powdered cleaning agents, as they can be abrasive and damage the image. Do NOT use steel wool. The use of solvents, alcohol, pine oil, or cleaners that contain these chemicals are prohibited as they will remove UV, Solvent and Latex inks.
