

Understanding your performance needs, material, and environment is all you need to choose the perfect VELCRO® Brand solution—one that looks great and delivers years of lasting durability. We want your next decision to be an easy one, so we've created this simple guide to make better sense of all the available options.

BEST FOR

Fabric

SEW ON – For general purpose hook and loop fastening needs that require a secure closure such as boat covers, side curtains, seat cushions, valances, and awnings. It's durable through repeated use, where fabrics need to be removed and reinstalled. Not ideal for high-heat, rigid, or heavy load-bearing applications.

Choose polyester sew on for applications exposed to UV, moisture, or frequent washing.

Hard Surfaces

ADHESIVE-BACK – Best for quick attachments on smooth, hard surfaces like plastic, metal, glass, and finished wood, or to temporarily position hook and loop to fabrics prior to stitching. Not suited for high heat, heavy loads or constant repositioning.

Choose polyester adhesive-back for improved UV resistance and moisture tolerance.

Bundling/Securing
Cables, Wires, etc.

ONE-WRAP® – Engineered with the hook and loop on the same flexible strip, making it easy to install and adjust when needed. Ideal for bundling and securing items such as cables, wires, and hoses, as well as fastening canvas sewn products like awnings, boat tops, and enclosures to railings and frames.

Permanent Attachment
to Hard Surfaces

VELSTICK® – Provides a stronger, more permanent attachment to hard surfaces. This semi-rigid, high-impact extrusion comes with hook and loop pre-attached, and is installed using staples, screws, or rivets. Commonly used on tents, awnings, and to secure marine cushions and mats in place.

Where Holding
Strength is Critical

AGGRESSIVE – Best for applications where a stronger fastener is required, such as side-by-side enclosure curtains that are subjected to wind and abuses of off-road action. Also great for tractor, ATV, and camper applications.
